

CASUALTY CARD & PACKAGE INSERT INCLUDED IN PACKAGING

INSTRUCTIONS FOR USE:

1) Open the inner package and remove applicator.

2) Insert applicator into wound track as close to bleeding source as possible.

3) Insert plunger into applicator and push plunger firmly to deploy sponges into wound.

DO NOT attempt to forcefully eject the material from the applicator. If resistance is met, pull back slightly on the applicator to create additional packing space, then continue to depress plunger.

4) Use additional applicators as necessary to completely pack the wound with sponges.

DO NOT attempt to remove sponges from wound. Sponges must be removed intraoperatively by a surgeon with the capability and equipment for achieving proximal and distal vascular control.

5) Cover the wound with an occlusive or pressure dressing. If available, use an elastic bandage.

6) If bleeding persists, apply manual pressure until bleeding is controlled.

7) Remove the included casualty card from the pouch. Assess patient for peripheral circulation and document presence of distal pulse on included casualty card. **WARNING:** Vascular compression greater than four hours is not recommended due to concerns related to limb ischemia.

8) Document clinical assessments, treatments rendered, and changes in the casualty's status on the included casualty card. Forward this information with the casualty to the next level of care.
